

Silent Sentinel Jaegar

Long-range visual intelligence for mission-critical environments

Wide, exposed environments make early threat verification harder and response timing more critical.

Assess threats at extreme distances before they disrupt operations or reach critical areas. Silent Sentinel Jaegar is a rugged, modular long-range system built for demanding applications across airports, maritime, defense, border security, critical infrastructure and counter-UAS operations. It helps teams verify events faster, reduce uncertainty and make earlier response decisions.

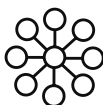

Long-range visual clarity

High-definition visible and cooled or uncooled thermal payloads help teams detect, recognize and identify activity at extended ranges in low visibility and harsh conditions.

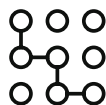

Engineered for resilience

Built for harsh, exposed environments where wind, salt, dust and temperature extremes can degrade conventional PTZ performance.

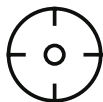

Mission-specific modularity

The through-shaft design supports mission-specific multi-sensor configurations, including optional acoustic hailer, laser range finder and radar-ready top-mount expansion.

Open integration

With ONVIF Profile S support and open control options, Jaegar fits into existing VMS and workflows without forcing major system change.

Radar-ready workflow

Supports automated radar-to-camera workflows that help operators move from initial alert to visual verification faster.

Superior lifecycle value

Designed for continuous operation and rapid field serviceability to help reduce downtime, simplify maintenance and protect long-term value.

Accelerate deployment and sustain long-term system performance

Reduce deployment risk and help maximize uptime. Backed by Motorola Solutions global and regional support resources, Silent Sentinel services help teams set up Jaegar correctly, prepare operators faster and sustain performance over time.

Services and support for the full Jaegar lifecycle

Deployment support

Reduce setup delays and configuration issues with expert guidance that supports proper setup, system tuning and smoother handoff.

Operational readiness and expert training

Prepare operators to manage long-range tracking, target verification and core system controls effectively during high-stress incidents.

Long-term lifecycle protection

Support long-term performance with technical support, training and ongoing software and hardware service coverage that help reduce avoidable downtime.
